

AHMAD FAROOQ

Software Engineer | Mobile Application Development — Flutter · React Native · Android · Node.js
Haripur, Pakistan · +92 347 5776857 · ahmadfarooq5581@gmail.com
LinkedIn: ahmad-farooq57bb771bb · GitHub: ahmad786-cpu · Portfolio: ahmad-farooq-portfolio.vercel.app

PROFESSIONAL SUMMARY

Mobile-focused software engineer building production Flutter, React Native and Android applications since 2021, backed by Node.js services on Google Cloud Platform. Delivered 50+ projects for 30+ clients, including two applications published to Google Play and a live multi-tenant commerce platform serving merchants across three marketplaces. Owns features end to end — requirements, architecture, implementation, release and post-launch support — and sets code standards and mentors junior engineers. Seeking to contribute to Huawei's consumer software and application ecosystem, with a strong interest in HMS Core and HarmonyOS application development.

TECHNICAL SKILLS

Mobile Flutter, Dart, React Native, Android (Kotlin / Java), BLoC, Riverpod, Flame; Play Store and App Gallery release workflows

Backend Node.js, Express.js, NestJS, REST API design, Python, PHP, Stripe payments

Databases Firebase / Firestore, PostgreSQL, MongoDB, MySQL, Redis, Supabase, Drift (offline-first SQLite)

Cloud & DevOps Google Cloud Platform, Firebase Cloud Functions, Git / GitHub / GitLab, Jira, Postman, CI-driven release, Agile & Scrum

Integrations Google Maps, Google Gemini AI, Shopify, WooCommerce, Daraz, Meta Ads API, push notifications, OAuth providers

Web & Design React, JavaScript, HTML5, CSS3, WordPress; Figma, Adobe XD, Photoshop

Engineering Practice Clean architecture, state management patterns, performance profiling, code review, technical mentoring, documentation

PROFESSIONAL EXPERIENCE

Mobile Application Developer

Jan 2021 – Present

ITech Computer Institute & Software House

Haripur, Pakistan

- Own delivery of Flutter and React Native client applications from architecture through to store release, including release signing, versioning and staged rollout.
- Build and scale enterprise Flutter applications with a focus on rendering performance, memory footprint and startup time across a wide range of Android device tiers.
- Integrate Google Maps, Stripe payments, push notification services and third-party authentication providers into production applications.
- Lead code reviews and define the BLoC and Riverpod standards adopted across the mobile team, improving consistency and reducing onboarding time for new developers.
- Mentor junior developers on architecture, state management and debugging practice.

Contract & Freelance Software Engineer

2019 – Present

Self-employed — remote engagements, Fiverr and direct clients

Remote

- Delivered 50+ projects for 30+ international clients across mobile, e-commerce and automation, maintaining a 100% client satisfaction rating.
- Architect Node.js and Firebase backend services on Google Cloud Platform, covering authentication, data modelling, cloud functions and monitoring.
- Own the full delivery lifecycle — requirement scoping, estimation, architecture, development, deployment and client handover.
- Work within distributed Agile teams across time zones, delivering to sprint commitments and release deadlines.
- Longer-running engagements include remote development contracts with Tech Solutions (2022 – present) and Innovation Lab (2021 – 2022).

SELECTED PROJECTS

Zyro Cloud — AI Commerce Operations Platform

LIVE · ZYROOCLOUD.COM

React Native · Node.js · WhatsApp Automation · Meta Ads API

- Unifies orders, inventory and customer records across Shopify, Daraz and WooCommerce in a single operations dashboard.
- Designed the multi-tenant data model that keeps inventory consistent across three independent marketplace APIs.
- Built WhatsApp AI messaging automation, courier tracking and Meta Ads analytics reporting for merchant users.

RouteBuddy — Carpooling Application

PUBLISHED ON GOOGLE PLAY

Flutter · Firebase · Google Maps

- Real-time ride matching and route optimisation for daily commuters, with live location tracking and in-app chat.
- Implemented Firebase authentication and offline-tolerant synchronisation for users on intermittent mobile networks.

Kardly Branding — Design Automation

PUBLISHED ON GOOGLE PLAY

Flutter · Template Engine · Automation

- Generates print-ready business cards and letterheads through a template-driven design and rendering engine.

Additional Projects

- SkillBuddy — hyperlocal marketplace connecting skilled workers with nearby clients (Flutter, Firebase).
- HomeHaven — property booking platform with live availability and Stripe payments (Flutter, NestJS, Stripe).
- Dukan e Khata — offline-first ledger with cloud sync and reporting (Flutter, Drift, Supabase).
- Shortify AI — long-form text summariser producing structured output (Flutter, Google Gemini).
- Titan VPN — VPN client with encrypted tunnelling and server selection (Flutter, networking).
- Automated Attendance System — final year project automating roll-call via camera-based recognition (Python, OpenCV).

EDUCATION

BS in Computer Science

2018 – 2022

University of Haripur — CGPA 3.26 / 4.00

Haripur, Pakistan

HSSC, Pre-Engineering

2016 – 2018

Jinnah Jam-e-School and College — 725 / 1100

Haripur, Pakistan

CERTIFICATIONS & TRAINING

- Flutter Application Development — WsCube Tech (2022).
- Android Development and Programming Fundamentals (PFTP), 2022.

LANGUAGES

English — Professional working proficiency · Urdu — Native · Hindko — Native

LEADERSHIP & COMMUNITY

- Led three global technology communities and hosted 50+ technical events with 2,500+ in-person attendees.
- Regular speaker and organiser on mobile development topics, building local developer capability and peer networks.
